

Buna başlamadan

Static route

Özellik

Ders:

Dynamic routing - Classification, RIP

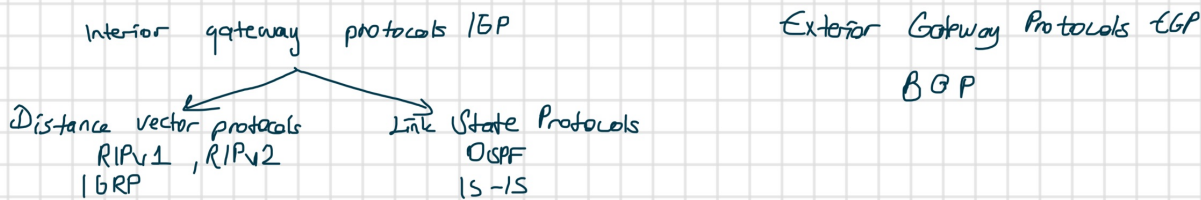

Static routing:

Manual route entries by the system administration

Dynamic routing:

Automatic

How dynamic routing works?

Dynamic routing protocols tablosu Özetli

Özetli tablo

Class addressing

Network mask

IP address range

Net mask

Number of networks

Number of hosts

Classless addressing

flexible

It is better

we can change size

there is no net mask

CIDR

Interior gateway: Inside the autonomous system

external gateway: Outside the autonomous system, ^{between} different autonomous systems

An autonomous system is a collection of routers
→ ASN

BGP: routing between network providers

→ for BGP we use autonomous system

ASN lookup → mxtoolbox.com

It is not easy to get ASN

tracert 8.8.8.8 → cmd bunu yaparsın

Neden ic'deki ip address ile IPv4 arayüzünde bulunan farklı IP adresler?

IPinfo. To

Distance vector routing protocol
Link state vector
Path vector
Labta bunu kullanacağız
deha basit diye
router knows only destination of the metric / google maps
arabalar için olan google maps. Pratikte bu-
various attributes for measurement.

routers send messages among themselves

RIP -> about messages

Why we have must be zero?
RIP v1 was based on another previous.

Where is the netmask?
There is no need to transfer network mask.

How often are these shipped messages?
Buna bak

show run

for dynamic kendi local networku yazıyoruz. Router bildiğinden network maski yazmıyoruz

PDU details

Network address 192.168.10.0 } I know about this network
2. route bu şekilde öğreniyor
Router informs other routers.

counter: how many seconds last from the last routing
possibly down eğer bir routerin pc ile bağlantısını kesersek bu
show ip route komutunda R gösterir

Discontinuous network bu hatlarda labda olacak

RIP v2:

burada mesajda network mask var
no auto-summary

disabled auto-summary

labta bu kısım
yapılacak

distance -> value assing to routing
for static 1
