final test ve final project after christmas

IP address: 172.16.139.5
Net mask: 255.255.192.0

IP
Net mask
1010 1000 . 0001 0000 . 1000 1011 . 0000 0101
1111 1111 . 1111 1111 . 1100 0000 . 0000 0000
172.16.139.5
1100 1011 . 0000 0101
1100 0000 . 0000 0000
1000 0000

Network address
172.16.128.0
172.16.128.1

Broadcast
172.16.191.254
172.16.191.255
1011 1111
 $2^{14} - 2 = 16382$

Suggest a suitable network for hosts

192.168.0.0
192.175.0.1

8
First host address: 1100 0000 1010 1000 . 0 . 0
Second host address: 1100 0000 1010 1111 . 0 . 1
Net mask
Network address: 192 - 168 . 00

We have to change net mask to solve this problem.

8
First host address: 1100 0000 1010 1000 . 0 . 0
Second host address: 1100 0000 1010 1111 . 0 . 1
Network address: 192 - 168 . 00

192.178.0.1/12 } NA
192.168.0.0/12 } 192.160.0.0/12

VLSM dynamic subnets

We have a network

Net address : 192.168.1.0
Mask : 255.255.255.0/24

$$192.168.1.00000000$$
$$2^8 - 2 = 254$$

100 hosts $\rightarrow 2^7 - 2 = 128 - 2 = 126$
125

Network address

will be same because we divide it
192.168.1.0/25

A)

NA : 192.168.1.0/25
Broadcast : 192.168.1.127

B)

NA : 192.168.1.128/6 $\rightarrow 50$ host
Broadcast : 192.168.1.191
 $2^6 - 2 = 62$

C) 50 hosts $\rightarrow 26$

NA = 192.168.1.192
Broadcast = 192.168.1.255

$$11000000$$

broadcast $\leftarrow 11111111$

$$128 = 10100000$$
$$111111$$
