

Access-list between Vlan

if we have
Overload: a lot of ip address in
access-list, we use it

access-list 10 permit 192.168.15.0 0.0.0.63 overload

Comment

Session layer:

Presentation layer:

Process data in a way that

SSL → secure sockets layer

TLS → transport layer security

Application	Presentation	Transport
↳ HTTP	↳ TLS	↳ TCP

Application layer protocols

dhcp: host configuration - router

dns: domain name server - TCP/UDP port 53

CNAME alias.

In dns why we have lots of
options for routers

dnschecker.org → hoca aok security

telnet

↳ connect unencrypted → not secure ☹

ssh → tcp 22

password 2

HTTPS → 443

↳ TCP connection-oriented bunu
unutmazum
