

lecture: will collaborate laboratory
 first-second: how work matlab
 third-fourth: Check the model

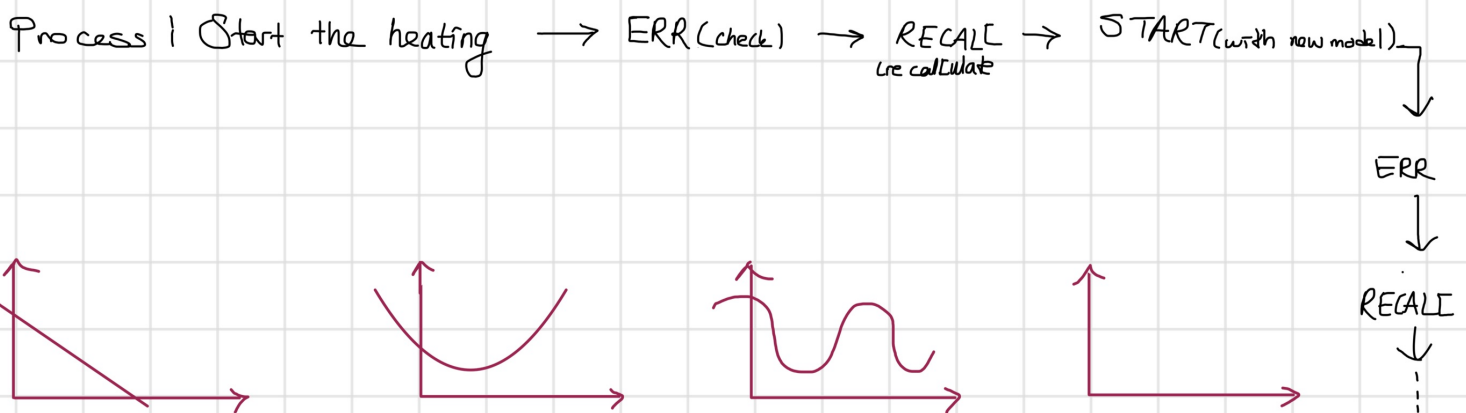

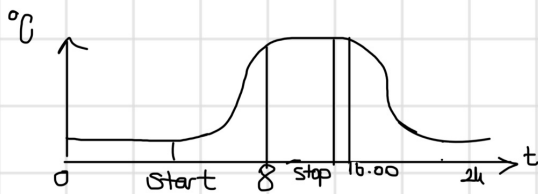

Neural networks: Working some way human brain. We don't know what it is in process.

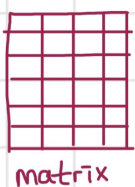

IDE: integrate development environments

optimum start: finding the time arrival start

working as possible as

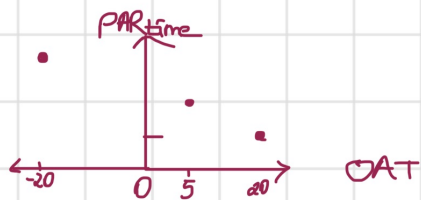

Model contain parameter [for example time, temperature]

↳ how long we can change 1°C room temperature according to outside temperature

START 19°
STOP 21°

PAR_t 15 time temperature

15 december will be finish for the course.

If there is an any problem teacher will be do another class.

Work home for project

In january, there is no subject for this class.
