

Find optimal value!

$$y = ax + b$$

$$y_1 = x_1 a + b$$

$$y_2 = x_2 a + b$$

$$\begin{array}{r} 21 = 7a + b \\ - 19 = 9a + b \\ \hline -2a = 2 \\ a = -1 \end{array} \quad \boxed{+28 = b}$$

$$y_1 = ax + b \\ -10 + 28 = 18$$

Aradaks olan olaylardan daha fazla etkilerinden uzak den noktaye seviriz yeri +20

Bu bir model olarak tanıtıldı.

$$x_1 \in [3, 5] \} \text{yataay} \\ x_1 \in [3; 5] \} \text{dikey}$$

$$PAR_T \rightarrow 20 \frac{m}{K}$$

X → real

drift parameter: changing very slowly by the time

we have to put bare to there because environment can change.

try to write script to find 2 different line ^{border} third point
second one
